

# How to Update your Laptop

Look at the bottom left of your screen – Click on the Windows icon.

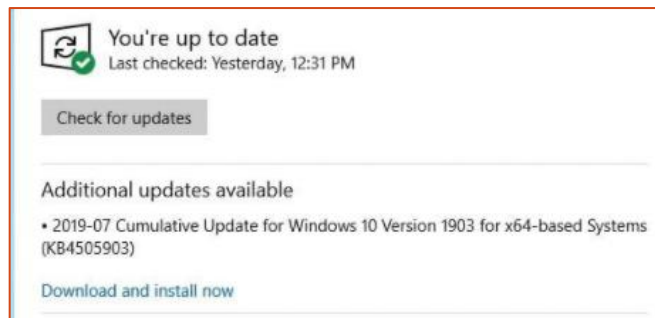

Find Settings - the "Gear" icon.

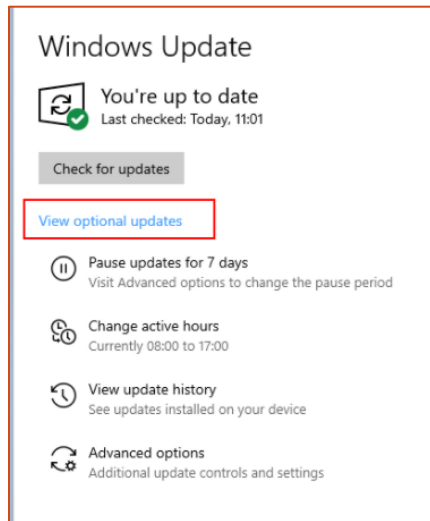

Click on "**Update and Security**" once you select this option the laptop will automatically search for needed updates and provide a list, scroll to the end and select "**Download and Install now.**"

**Restart the laptop after the updates finish installing.**

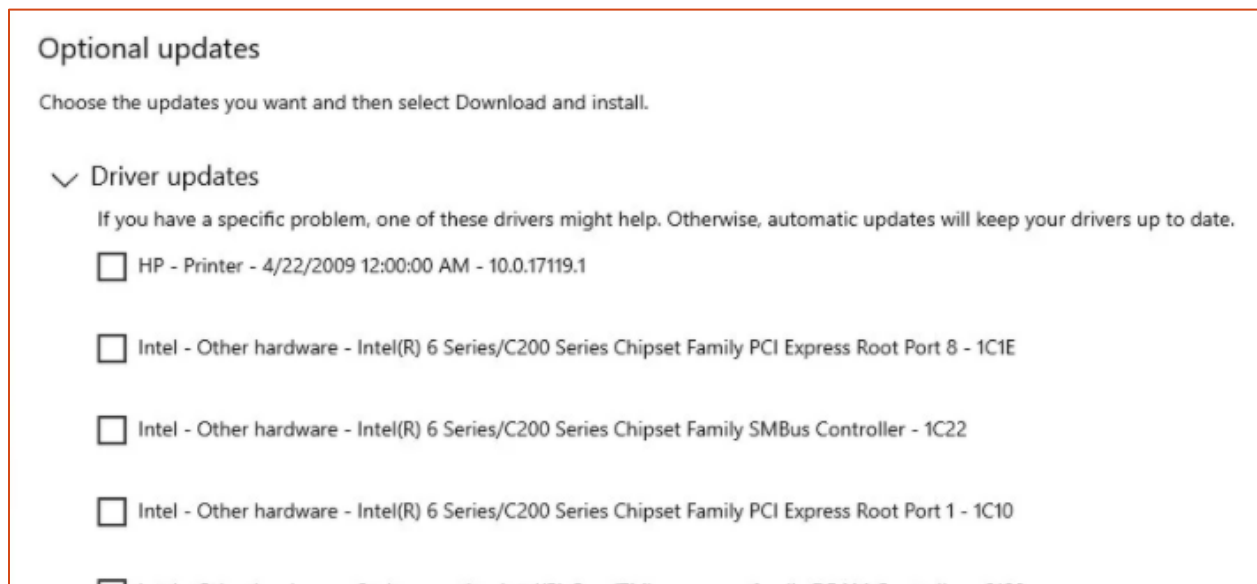

If the laptop does not show any needed updates it is likely the device is up to date verify by clicking on "Check for updates"

Once all Windows updates are complete and the laptop has been restarted **check for optional updates**

Click on arrow next to “Driver updates” to expand the view and **in check off boxes for any available driver updates**. Click on install now, **restart your laptop when install is complete**.

**Once you are successfully able log back into to your laptop you have completed the process.**

Congratulations! Your laptop is up to Date!
